Lighthouse Systems opens office in Singapore

January, 2006 – Lighthouse Systems Inc., a leading provider of shopfloor data collection software, announced the opening of an office in Singapore. This strategic decision is supported by a couple of main factors. First, Asia is continuing to grow and expand manufacturing operations. All fortune 1000 companies are currently doing business in Asia in one form or another. As such, manufacturers demand access to products and support in the areas where they have plants.

Second, the exponential growth of Shopfloor-Online™, Lighthouse's flagship software solution that supports data collection for manufacturing organizations has helped drive this expansion to these overseas markets.

Shopfloor-Online™ is a Web-Enabled Shopfloor Data Collection solution designed for use by manufacturers looking to collect real time information about their process. With direct offices in the USA, UK and Singapore, Lighthouse is uniquely positioned to support large scale, multi-plant implementations across the globe.
